The rejection of the claims under 35 USC 112, first paragraph has been dropped for the reasons argued by applicant. Also the rejections of the claims under 35 USC 102 and 35 USC 103 have been dropped for the reasons argued by applicant.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 9-14 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Seiden (5,288,512).

Seiden discloses reduced calorie fats made from triglycerides that contain medium chain triglycerides. The array of triglycerides that result

from the combination of medium chain fatty acids and long chain fatty acids is shown at column 7, lines 4-42. The composition is stated to contain at least 15% triglycerides with the desired combinations of fatty acids (column 3, line 30). The fat is further stated to contain at least 10% by weight of a mixture of MML and MLM triglycerides (column 7, lines 14-15). The levels of MMM are stated to be minimized at a level of no more than 5% by weight MMM and most preferably not more than 2% by weight MMM (column 7, lines 35-38).

At column 3, lines 39-50, the amount of medium chain saturated fatty acids (MCT) is shown to range from 15% to about 70% while the amount of long chain saturated fatty acids is shown to range from 10% to 70%. The fats are used in cooking as shown at column 9, lines 60-68. The inclusion of an emulsifier is shown in example 3, where hexaglycerol monopalmitate emulsifier is included at a level of 0.3%.

Thus the reference shows that each of the components of the claims falls within the range of the teachings of the reference. The claims appear to differ in the suggestion of the specific level of each ingredient. It would have been obvious to one of ordinary skill in the art to modify the level of

each of MCT and LCT in Seiden in order to optimize the melting properties of the product (as shown at column 4, lines 54-68). It is appreciated that additives are not shown in the reference but additives are well known in the art to modify the taste, texture and stability of foods.
